隨 11 $q = 10L^{\frac{1}{2}}K^{\frac{1}{2}}$, $w=r=10$, k 固定 k 。

$$\# \text{ STC} = wL + rK$$

成本極小化

A) STC, AC, MC

$$q = 10L^{\frac{1}{2}}K^{\frac{1}{2}} \Rightarrow L^* = \frac{q^2}{100K}$$

$$\text{STC} = 10 \times \frac{q^2}{100K} + 10K = \frac{q^2}{10K} + 10K \#$$

$$\text{SAC} = \frac{q}{10K} + \frac{10K}{q} \#$$

$$\text{SMC} = \frac{d\text{STC}}{dq} = \frac{2q}{K} \#$$

B) 反推 STC

$$\frac{d\text{STC}}{dK} = -\frac{q^2}{10K^2} + 10 = 0 \Rightarrow K = \frac{q}{10} \text{ (找 } K \text{ 最小, 所以微分)}$$

$$\text{STC} = q + q = 2q \#$$

隨 12 $q=20$, AC 與 AVC 差 10, $q=40$, 差?

$$q=20, AC = AFC + AVC, AFC = 10$$

$$AFC = \frac{FC}{q} = \frac{rK}{q}, FC = 200$$

$$q=40, AFC' = 5 \#$$

隨 13, $MC = 10q$, $FC = 100$, $q = 10$, TC ?

$$TC = FC + TVC = 100 + TVC$$

$$MC = \frac{dVTC}{dq} = 10q$$

$$VTC = \int MC dq = \int_0^{10} 10q dq = 5q^2 \Big|_0^{10} = 500$$

$$TC = 100 + 500 = 600 \#$$
